

The difference between pressure sensor **9035** and **9312**

Both Meat&Doria codes refer to Bosch code: 0 281 002 788.

Please pay attention though as they have different applications. Code 9312, consists of the fuel pressure sensor 9035, with an additional washer and a bushing, absolutely necessary for a correct mounting.

Code 9035 can be used for Alfa Romeo, Fiat, Iveco and Renault applications, whereas code 9312 is to be used for BMW and Land Rover applications.

If code 9035 is used by accident in BMW and Land Rover applications without the special washer and bushing, the necessary sealing will not be achieved.
